

# POTABLE WATER NOTABLE INSTALLATIONS

Ozone is a natural purifier that has been used to purify water since the early 1900s. ClearWater Tech systems produce ozone-enriched water which is produced on site and uses few to no chemicals in order to eliminate pathogens and many other organic and inorganic contaminants. And because ozone is an oxygen-based oxidizer it leaves no chemical by-products behind - just pure clean water.

- **Luxury Charter yacht Nirvana** potable water
- **United States Forest Service** potable water
